Weather prediction by numerical process. by Richardson, Lewis Fry, Publication date Topics Weather forecasting. Publisher Cambridge, The University press. Collection cdl; americana. Digitizing sponsor MSN. Contributor University of Pages: Excerpt from Weather Prediction by Numerical Process In Ch. 8 the whole system of arithmetical operations is reviewed in order. With regard to the horizontal differential coefficients the general method may be briefly described in the following four sentences Take the differential equations and replace everywhere the infinitesimal operator  $\delta$  by  $\frac{d}{dt}$  Reviews: 3. The idea of forecasting the weather by calculation was first dreamt of by Lewis Fry Richardson. The first edition of this book, published in 1922, set out a detailed algorithm for systematic numerical weather prediction. 6 Weather Prediction by Numerical Process 1. A sufficiently accurate knowledge of the state of the atmosphere at the initial time. 2. A sufficiently accurate knowledge of the laws according to which one state of the atmosphere develops from another.

It is heavily operator-based and relies on the availability of skilled meteorologists working full-time to be able to provide timely and accurate forecasts. Numerical weather prediction models are computer simulations of the atmosphere. These models provide the foundation of the weather forecast. The models use an analysis of the current weather as a starting point and then project the state of the atmosphere in the future.
